

VeriCenter, Inc. Reports \$7.2M in Q2 Bookings, Positioned to Exceed \$80 Million in Annualized Revenue in Q3

Managed Hosting and Infrastructure Services Company achieves new record level of managed services bookings; Q2 bookings are 75% Managed Hosting Services and 25% Colocation.

Houston, Texas, July 2, 2007 - VeriCenter, Inc., a leading provider of managed hosting, colocation, and infrastructure services for mid-to-large enterprises, today announced second quarter 2007 bookings of \$7.2 million in annual recurring revenue, with a 75/25 ratio of managed to colocation bookings. Managed services bookings of \$5.4 million in annual recurring revenue represent an all-time quarterly bookings record for this critical component of the VeriCenter revenue mix. Bookings are reported in terms of annualized recurring revenue associated with new customer contracts producing monthly recurring revenue (MRR) for VeriCenter. New customer contracts typically have durations ranging from two to three years. VeriCenter will report its second quarter revenue results, along with quarterly and annual revenue comparisons, later in July. These results are expected to be in line with our growth targets and annual business plan.

"VeriCenter entered Q2 at \$74 million in annualized recurring revenue", said Gray Hall, CEO and president of VeriCenter, Inc. "Our outstanding performance in Q2 positions VeriCenter to surpass the \$80 million annualized revenue milestone in Q3. We expect Q3 bookings to be strong as we continue to establish VeriCenter as a leader in the mid-to-large enterprise market for managed hosting services. At the rate of organic growth we have produced consistently since our last acquisition in 2005, VeriCenter remains on course to exceed \$100 million in revenue in 2008."

About VeriCenter, Inc.

VeriCenter is a leading provider of managed hosting, colocation, and infrastructure services for mid-to-large enterprises. From a nationwide network of seven premier data center facilities, VeriCenter provides a comprehensive range of managed services including management of servers, storage, backups, network, databases, and security to more than 600 business customers in a broad range of industries. Our centralized service delivery model provides a better way to achieve reliability, scalability and cost-effectiveness for IT infrastructure in support of enterprise applications, Web sites, SaaS (software as a service) applications, disaster recovery solutions and general business infrastructure. As a two-time winner of Inc. 500's fastest-growing companies in the United States, VeriCenter is a market leader in managed hosting services and is ideally positioned to guide enterprises through the long-term industry evolution toward Utility Computing.
